

1.3 – What's the difference

SparkView is quite different compared with other similar solutions:

- It is designed to be a replacement of native client, not a complementary solution.
- It is designed for speed. It's even faster than our Java applet.
- It is feature rich, not feature less compared with native clients.
- SparkView only features:
 - RemoteApp (not start program on connection)
 - Session Recording/Playback
 - Session Shadowing
 - Hyper-V console connection
 - Network Level Authentication
 - Current Windows and Windows Server versions with touch remoting support
 - XRDP (Linux) support
 - RD Web Access Portal Integration
 - OpenID integration
 - Support both PostScript and PCL printers.
 - Support more audio encodings. 80% less bandwidth usage (when playing audio) compared with other HTML5 solutions.
 - Client side IME support. You can use client side IME directly (Microsoft RDC doesn't support client side IME).
