

2.8 – Integrating a license

To integrate a license file into SparkView, please note the following steps:

1. Stop SparkView service
2. Copy the license file into the SparkView root directory
 - Windows default: `C:\Program Files\Remote Spark\SparkGateway`
 - Linux/macOS default: `/usr/local/bin/SparkGateway`
3. Rename the license file to `license`. **Important: no file extension!**
4. Start SparkView Service

You can then check the license status via `config.html` at the bottom:

If the license file is in a different location, please specify this via the corresponding parameter in the `gateway.conf` file:

```
# Example for Windows
license = C:\\Program Files\\Remote Spark\\SparkGateway\\licensefile

# Example for Linux/macOS
license = /usr/local/bin/SparkGateway/licensefile
```
