3.3 – Remote Desktop Web Access Portal Integration

A user can log in with his domain user name and password and get the RemtoeApps or desktops published on the web access portal with the integration.

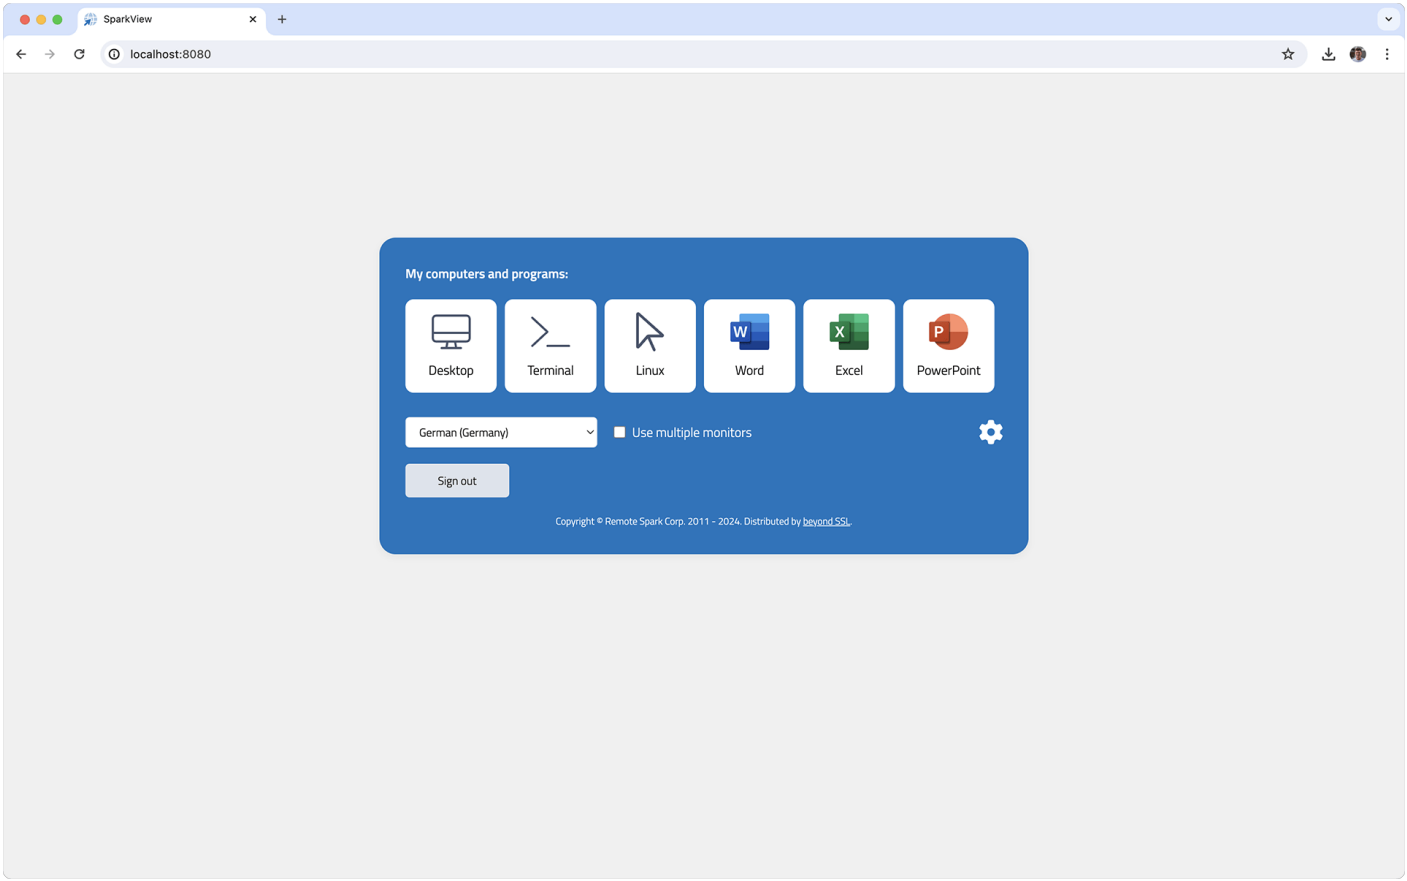

What you need:

1. RemoteApp is published and Web Access is enabled.
2. Web Access portal must be in domain.

What you should do:

1. Set up the web feed URL of you web access portal in gateway.conf. This URL is your address of your portal + /RDWeb/feed/webfeed.aspx, for example: webfeed = https://sparkview.beyondssl.com/RDWeb/feed/webfeed.aspx
2. Use login.html as the start page, set directoryIndex = login.html;rdp.html;index.html in gateway.conf.
3. Make sure html directory is configured in gateway.conf. Gateway will save application icons under this directory (in RDWeb subdirectory).

You don’t need to set up RDP hosts or users in servers.json and users.json anymore.
