

# 3.8 – Clipboard redirection and shared clipboard

You can only copy text, image and html between local and remote because of the browser's restriction, but you can copy anything, including files, between any connected sessions (shared clipboard on gateway).

Spark View can tell you are copying from local or another session and enable shared clipboard automatically.

- Some browsers can only access local clipboard when you are doing copy/paste, so you'll have to use keyboard (Ctrl+C/V) instead of Copy/paste menu. Right click (context menu) copy is only supported on Chrome and IE. Right click paste is only supported on IE.
- You'll see a copy dialog to ask you copy the content again on browsers which doesn't support right click copy/paste.
- On Mac, you'll need to use Command key instead of Ctrl key.
