2.2 – Active Directory and LDAP

If all your users are domain users, please create a plain text file (encoding: UTF-8 without Byte Order Mark) with following context:

```
{
  "source":{
    "type": "AD",
    "properties": {
      "server": "ADServerAddress"
    }
  }
}
```

Save it as users.json or other name and specify the location of this file in gateway.conf:

```
user = C:\\workspace\\data\\users.json
```

You can configure servers used by all the users in servers.json and specify the location of servers.json in gateway.conf:

```
server = C:\\workspace\\data\\servers.json
```

If you are using a LDAP server, please change the type to “LDAP”. You can also configure AD/LDAP users in users.json:

```
{
"users": [
  {
    "name": "user1",
    "password": "user1",
    "servers": [
      "RdpServer1",
      "TEST",
      "Excel 2010"
    ],
    "isDomainUser": true,
    "transferCredential": true,
    domainServer: "serverAddr"
```

```
    }
}
```
