

## 2.2 – Active Directory and LDAP

If all your users are domain users, please create a plain text file (encoding: UTF-8 without Byte Order Mark) with following context:

```
{
  "source": {
    "type": "AD",
    "properties": {
      "server": "ADServerAddress"
    }
  }
}
```

Save it as users.json or other name and specify the location of this file in gateway.conf:

```
user = C:\\workspace\\data\\users.json
```

You can configure servers used by all the users in servers.json and specify the location of servers.json in gateway.conf:

```
server = C:\\workspace\\data\\servers.json
```

If you are using a LDAP server, please change the type to “LDAP”. You can also configure AD/LDAP users in users.json:

```
{
  "users": [
    {
      "name": "user1",
      "password": "user1",
      "servers": [
        "RdpServer1",
        "TEST",
        "Excel 2010"
      ]
    },
  ],
}
```

```
"isDomainUser": true,  
"transferCredential": true,  
domainServer: "serverAddr"  
}  
}
```
