

3.8.1 – Start up a server or application automatically after login

To start up a server or application automatically after login, you can set the following parameters in the file `html/appcfg.js`. Please ensure, that your content is placed inside the `hi5.appcfg = {}` brackets:

```
hi5.appcfg = {  
  startup: {  
    server: "", //If server is "" or not found, the first one will be opened instead.  
    newWindow: false //Open in new window  
  },  
}
```

After editing, save the file and restart SparkView.
